

Celeco model gateway guide

ASSESSMENT SERVICE

CELECO-MODEL-001

What Celeco provides

Celeco provides a private OpenAI-compatible chat endpoint for the runtime AI inside your submission. The gateway keeps the model configuration consistent across candidates. It is separate from Northstar's Operations account and APIs.

Aditi Rao, Celeco's engagement manager, owns access and support for this gateway. Northstar staff do not administer it.

Access

Open the Model gateway tab in your T-1 workspace and copy the private access key. Keep it in an environment variable and never commit it.

```
Authorization: Bearer $CELECO_MODEL_GATEWAY_KEY  
POST https://hiring.celecolabs.com/api/assessment?route=model
```

Request

```
{  
  "model": "celeco-assessment-chat-v1",  
  "messages": [{"role": "user", "content": "Classify this request."}],  
  "temperature": 0,  
  "max_tokens": 1200  
}
```

The response follows the familiar chat-completions shape. Build against the alias shown above rather than a provider model name.

Assessment allowance

- 300 requests.
- 1 million input tokens and 150,000 output tokens.
- Up to 30 messages and 60,000 characters in one request.
- 2,048 maximum output tokens per request.

The allowance is intentionally large enough for development and testing but small enough to reward deliberate experiments. Reservations are atomic, so simultaneous requests cannot exceed the assessment cap.

Supported request contract

- One to 30 system, user or assistant messages.
- Text content only, with at most 60,000 characters across the request.
- Temperature from 0 to 1 and an optional JSON-object response format.
- No provider-specific tools, files, images, embeddings or model names.

Testing advice

Use the gateway while developing and in the submitted runtime. Test malformed or incomplete model output, timeouts and non-deterministic wording. The evaluator checks structured behaviour and observed side effects rather than an exact prose match.

Support boundary

Email Aditi for gateway access, limits or failures. Ask Nikhil at Northstar for their internal platform, data and API access.

Shared by Celeco Labs for this engagement.
